FIRST CLASS  
SERVICE**

[www.manco.sa](http://www.manco.sa)

MANCO Blinds offers a full curtain hanging service, overhaul of existing cubicle rails and supplies and installs new Movatrack cubicle rails.

The disposable Med-Curtain system by Bin Ateeq blinds enables hospitals to balance time and cost against hygiene issues.

With infection control being one of the most crucial aspects of the hospital environment, disposable Med-Curtain can play an important role in hospital infection control strategy. Usually Med-Curtains are changing durations is according to the Usage area characteristics. Heavy patients flow area or heavy usage area may need to change 1-2 in a Month. eg: Emergency Area, Operation Theater etc.

Normal type Usage area may need to change in one time in 3-4 month, or closed rooms may need to change one in 6-8 months Maximum.

Some of the benefits of the Disposable Medi-Curtain system:

**Highly effective infection control**

**Cost effective**

**Smart appearance**

**Easy to fit and replace**

**Easy to monitor**

**Environmentally friendly**

**Fire retardant BS 5867 Part 2  
Type C compliant**

**100% Recyclable**

## Fighting back against hospital acquired infections

Disposable Med-Curtains by MANCO Blinds have been proven to be a vital tool in the battle against hospital acquired infections. When hospitals have introduced disposable curtains on their wards, alongside other infection control measures, they have seen significant reductions in infection rates.

Disposable Med-Curtains are economical and easy to fit and change. This means they can be replaced frequently, which is key to their effectiveness in infection control.

## Treated with ISET antimicrobial protection

The use of standard fabric curtains in hospitals has been scientifically linked to the source of 'comparatively high counts of organisms'.

Because disposable Med-Curtains are manufactured from 100% polypropylene, which is an inert material, infectious organisms struggle to survive within its fibres.

To aid the prevention of infection, each curtain is treated with ISET antimicrobial protection which has been tested against a full range of dangerous bacteria and is effective against MRSA.

Each curtain is supplied in its own protective sleeve with either an eyelet top, peg top, S hooks fitting. The curtain can be hung directly onto the track system without it having to be laid across a work surface or on the floor. Once attached, the protective sleeve can then be removed, avoiding any possible contamination from the surrounding area.

## Disposable Med-Curtains by Bin Ateeq blinds are resistant to a full range of dangerous bacteria

Vancomycin-resistant enterococci

Escherichia coli

Clostridium difficile

Methicillin-resistant Staphylococcus aureus (MRSA)

Enterococcus faecalis

Pseudomonas aeruginosa

## For all types of track system, ready to hang

For quick and easy replacement, disposable Med-Curtains are supplied with the hanging system already fitted and are available in the standard styles:

Eyelet Top, S hooks and Peg Top. When ordering your curtains, simply state your preferred style.

## Easy-to-monitor curtain change intervals with customised labelling system

To ensure they are changed regularly, each disposable Med-Curtain features a label to be completed by staff. This allows hospitals to monitor curtain change intervals and self-audit the curtain change policy for each individual department.

## Ease of use, fast to replace

Unlike conventional fabric curtains, Disposable Med-Curtains can be replaced in a matter of minutes. The full width curtains are supplied in boxes of 10, half width 20, and are easy to carry and store within a hospital ward. New curtains are then close at hand for when staff need to fit a replacement.

Curtains also feature a handy velcro fastening for easy storage when not in use.

## Clean and smart appearance

Supplied pre-pleated, disposable Med-Curtains stay looking neat and tidy and will smarten up a hospital ward usually fitted with conventional curtains. When not in use, just stow the curtains away compactly against the wall, giving patients and staff more light and generally improving the hospital environment.

## Flame retardant

Disposable Med-Curtains comply with the fire retardancy standard BS 5867 Part 2 Type C.

## Gentle on the environment

Our curtains are fashioned in polypropylene which has one of the lowest environmental impacts of any material available, man-made or natural.

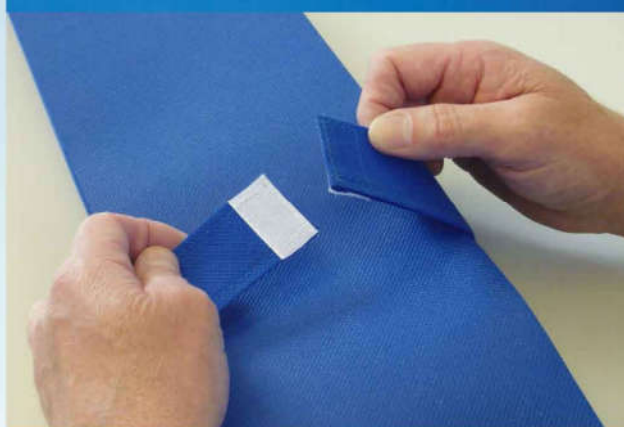

## Quick and easy to replace

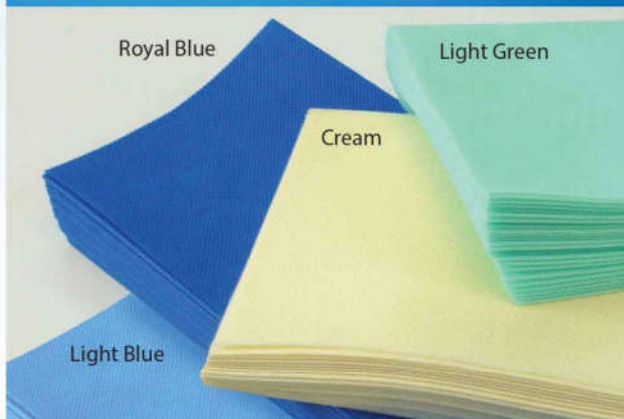

## Customised labelling system

## Handy velcro fastening for easy storage

## Full colour range
